11. Toxicological information

Acute toxicity

All product constituents are considered to be nonhazardous. Tetagam® P is manufactured according to the same procedure as Beriglobin® P a human normal immunoglobulin. Therefore reference is made to toxicological studies performed with Beriglobin® P. The product is intended for intramuscular application only, therefore no oral, dermal or inhalation toxicity studies have been performed.

Single dose toxicity studies:

Acute toxicity studies were performed in rodents (mice, rats) with single i.m. injection. Mice were administered doses up to 8 g/kg and rats doses up to 1.6 g/kg b.w.. In a study using prefilled syringes rats were administered with 100 µL/animal intramuscularly. No relevant toxic findings were observed in these studies.

Local tolerance:

Local tolerance studies were performed in rabbits and rats with single i.m. injections. Rabbits were administered a dose of 0.5 mL (80 mg/rabbit) and rats were injected a dose of 100 µL/animal i.m., respectively. The substance was regarded as local tolerable after i.m. injection.

Safety Pharmacology:

Dogs were injected i.m. at a maximal dose of 480 mg/kg (3 mL/kg) b.w. No relevant adverse effect was observed.

There are no ingredients in this product which are classified as hazardous, and/or no hazardous ingredients above the GHS cut off percentage.
